#### Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

1. User submits an IT incident with caller name and short description.
2. Flow Designer reads the description and checks classification keywords.
3. The matching Category and Subcategory are assigned automatically.
4. The classified incident is stored and routed to support staff.
5. A confirmation email is sent to the requester.

## User Stories

Use the below template to list all the user stories for the product.

| User Type         | Functional Requirement (Epic) | User Story Number | User Story / Task                                                                                | Acceptance criteria                                  | Priority | Release  |
|-------------------|-------------------------------|-------------------|--------------------------------------------------------------------------------------------------|------------------------------------------------------|----------|----------|
| Student / Teacher | Incident Submission           | US-1              | As a student or teacher, I can submit an IT support incident with my name and issue description. | Incident is submitted successfully.                  | High     | Sprint-1 |
| Student / Teacher | Automatic Classification      | US-2              | As a requester, I can have my incident automatically classified from its description.            | Category and subcategory are assigned.               | High     | Sprint-1 |
| Student / Teacher | Automatic Classification      | US-3              | As a requester, I can have the ticket routed using the correct category and subcategory.         | Ticket is routed to the appropriate support process. | High     | Sprint-1 |
| Student / Teacher | Email Notification            | US-4              | As a requester, I can receive an email confirmation after submitting my incident.                | Confirmation email is generated after processing.    | Medium   | Sprint-1 |
| Support Staff     | Incident Management           | US-5              | As support staff, I can receive incidents with category and subcategory already assigned.        | Classified ticket is available for handling.         | High     | Sprint-1 |
| Support Staff     | Incident Management           | US-6              | As support staff, I can review stored incident details and classification.                       | Incident record contains the submitted details.      | High     | Sprint-2 |
| Administrator     | Flow Configuration            | US-7              | As an administrator, I can maintain classification rules for new issue keywords.                 | Rules can be updated as requirements change.         | Medium   | Sprint-2 |
| Administrator     | Monitoring & Maintenance      | US-8              | As an administrator, I can maintain the automated ticket classification workflow.                | Workflow remains structured and maintainable.        | Medium   | Sprint-2 |
