

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	2 October 2026
Team ID:	SWTID-2026-5797
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Submission	Submit an IT support incident through the incident form with caller name and short description.
FR-2	Automatic Classification	Flow Designer reads the issue description and assigns the appropriate Category and Subcategory.
FR-3	Notification & Routing	Send an email notification after classification and route the incident for support handling.
FR-4	Structured Incident Storage	Store incident details and classification in a structured record for consistent support tracking.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple incident submission and automatic classification reduce manual effort.
NFR-2	Security	Incident access and records use configured ServiceNow access controls.
NFR-3	Reliability	Rule-based Flow Designer logic provides consistent classification.
NFR-4	Performance	Automatic classification and routing reduce processing time.
NFR-5	Availability	The solution runs on the ServiceNow platform.
NFR-6	Scalability	Add new categories, subcategories, and rules as needs grow.
