

Project Design Phase-II
Technology Stack (Architecture & Stack)

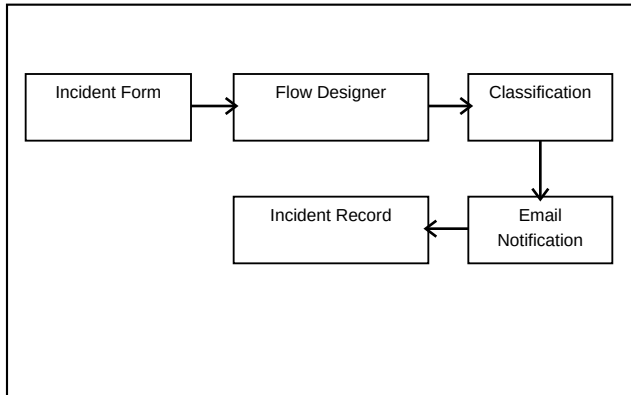

Date	2 October 2026
Team ID	SWTID-2026-5797
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Auto Ticket Classification using Flow Designer

Reference: ServiceNow Flow Designer based incident automation

- Include all the processes as application logic / technology blocks.
- Show the ServiceNow platform boundary and user interaction.
- Indicate data storage used for incident records.
- Show external interfaces only if the project uses them.
- Indicate machine learning model interface if applicable.

S.No	Component	Description	Technology
1.	User Interface	How user creates an IT support incident and submits the issue description.	ServiceNow Incident Form

2.	Application Logic-1	Classifies incident from the short description and routes it.	ServiceNow Flow Designer
3.	Application Logic-2	No separate application logic component is used.	Not applicable
4.	Application Logic-3	No separate assistant component is used.	Not applicable
5.	Database	Stores incident, category, subcategory and ticket details.	ServiceNow tables
6.	Cloud Database	Incident data is stored within the ServiceNow platform.	ServiceNow cloud data store
7.	File Storage	No file storage is required for core classification.	Not required
8.	External API-1	No external API is required for classification.	Not used
9.	External API-2	No second external API is required.	Not used
10.	Machine Learning Model	Rule/keyword-based classification; no ML model is required.	Not used
11.	Infrastructure (Server / Cloud)	Application runs on the ServiceNow cloud platform.	ServiceNow cloud instance

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	No external open-source framework is required for the core flow.	ServiceNow Flow Designer
2.	Security Implementations	Role-based access and platform authentication protect incident records.	ServiceNow roles / ACLs
3.	Scalable Architecture	Flow Designer separates ticket intake, classification and notification steps.	ServiceNow Flow Designer
4.	Availability	Application is available on the ServiceNow cloud platform.	ServiceNow cloud platform

S.No	Characteristics	Description	Technology
5.	Performance	Flow runs when an incident is created and uses lightweight keyword conditions for classification.	ServiceNow Flow Designer; condition-based routing
