

Project Design Phase Solution Architecture

Date	3 October 2026
Team ID:	SWTID-2026-5797
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram:

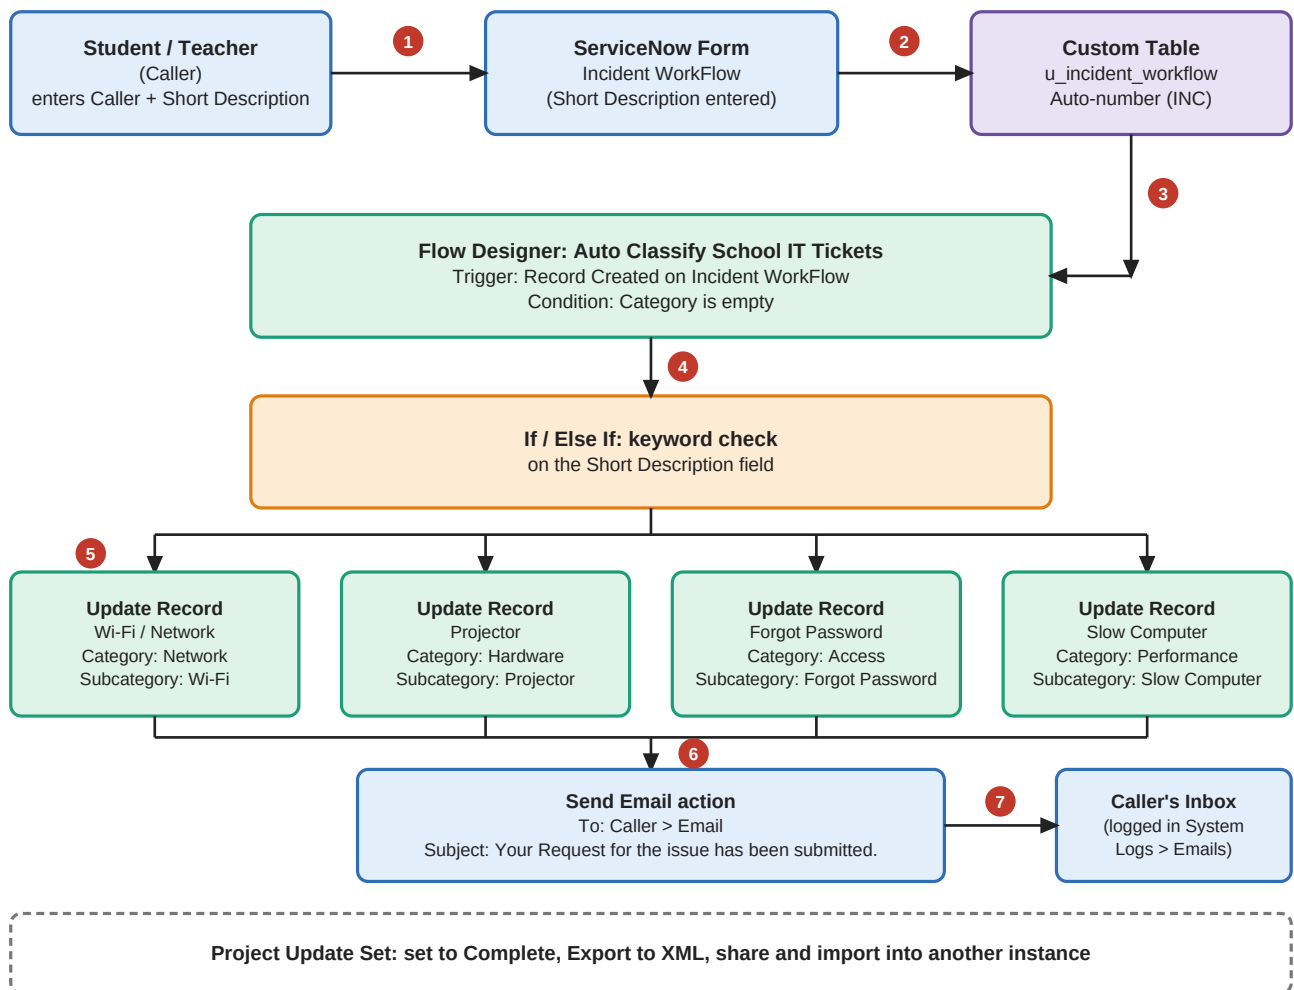

Figure 1: Architecture and data flow of the Auto Ticket Classification using Flow Designer solution

Components and Data Flow:

Step	Component	Description
1	Student / Teacher (Caller)	Raises an IT support ticket (Wi-Fi, projector, password or slow computer issue). Only the Caller and Short Description are entered.
2	ServiceNow form, Incident WorkFlow	The ticket is submitted through the form of the custom table.
3	Custom table u_incident_workflow	Stores the ticket with an auto-generated number (INC prefix). Fields: Caller, Category, Subcategory, Short Description, Description, State, Assigned Group, Assigned to. Creating a record fires the flow trigger.
4	Flow Designer: Auto Classify School IT Tickets	Trigger is Record Created with the condition Category is empty. If / Else If conditions check keywords in the Short Description.
5	Update Record actions	Sets Category and Subcategory: Wi-Fi / Network = Network, Wi-Fi; Projector = Hardware, Projector; Forgot Password = Access, Forgot Password; Slow Computer = Performance, Slow Computer. Dependent choice fields keep the pair consistent.
6	Send Email action	Sends the confirmation email to the Caller's email address after classification.
7	Caller's inbox / System Logs	The caller receives the acknowledgement; the sent mail can be verified under System Logs > Emails.
-	Update Set (deployment)	The Project Update Set is marked Complete and exported as XML so the solution can be imported into another ServiceNow instance.
