

Project Development Phase

Model Performance Test

Date	03 October 2026
Team ID:	SWTID-2026-5797
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	Model type: Rule-based (keyword) classification built with ServiceNow Flow Designer — no-code, no machine-learning model. Flow: Auto Classify School IT Tickets (Global). Trigger: Record Created on Incident Workflow where Category is empty. Logic: If / Else If on Short description “contains”, then Update Record: • Wi-Fi or Network → Category Network, Subcategory Wi-Fi • Projector → Hardware, Projector • Forgot password → Access, Forgot Password • Slow computer → Performance, Slow Computer Output action: Send Email to the Caller (subject: “Your Request for the issue has been submitted.”).	
2.	Accuracy	Training Accuracy – Not applicable (no model training; classification is rule-based). Validation Accuracy – Not applicable as a percentage. Functional validation: both test scenarios were classified as expected and the confirmation email was sent to the caller. • Scenario 1 (INC00511): Category Network, Subcategory Wi-Fi • Scenario 2 (INC00512, “Projector not turning on”): Category Hardware, Subcategory Projector	
3.	Fine Tuning Result(if Done)	Not done — no model is trained, so no fine tuning applies; the flow conditions were used as configured. Validation Accuracy – Not applicable.	–
