

# Project Development Phase

## Model Performance Test

|                      |                                                |
|----------------------|------------------------------------------------|
| <b>Date</b>          | 03 october 2026                                |
| <b>Team ID:</b>      | SWTID-2026-5797                                |
| <b>Project Name</b>  | Auto Ticket Classification using Flow Designer |
| <b>Maximum Marks</b> |                                                |

### Model Performance Testing:

Project team shall fill the following information in model performance testing template.

| S.No | Parameter                   | Screenshot / Values                                                                                                                                                                                                                                                                                                                                                                                        |
|------|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.   | Data Rendered               | <p>Ticket data is stored in the custom table <b>Incident WorkFlow</b> (u_incident_workflow) with fields: Number (auto-number, prefix INC), Caller, Category, Subcategory, Short Description, Description, State, Assigned Group, Assigned to. Records are displayed on the Incident Workflow form (e.g., INC00511).</p>  |
| 2.   | Data Preprocessing          | <p>No separate preprocessing step; data is standardized at capture: choice lists for Category, Subcategory and State, a dependent Subcategory (Wi-Fi → Network, Projector → Hardware, Forgot Password → Access, Slow Computer → Performance), reference fields (sys_user, sys_user_group) and auto-numbering.</p>       |
| 3.   | Utilization of Data Filters | <p>Flow trigger condition: <b>Category is empty</b> (Record Created on Incident Workflow). Classification conditions: <b>Short description contains</b> Wi-Fi / Network, Projector, Forgot password, Slow computer. Emails list filtered by Subject.</p>                                                                |
| 4.   | DAX Queries Used            | Not applicable – no Power BI / DAX is used; classification is configured in Flow Designer.                                                                                                                                                                                                                                                                                                                 |
| 5.   | Dashboard design            | No of Visualizations / Graphs – 0 (no dashboard in this project).                                                                                                                                                                                                                                                                                                                                          |
| 6.   | Report Design               | No of Visualizations / Graphs – 0 (no report in this project).                                                                                                                                                                                                                                                                                                                                             |
