

Functional & Performance Testing Template

Model Performance Test

Date	3 october 2026
Team ID	6ab8b175c23107aaaa72cd74
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text Input Validation (Caller and Short description fields on the Incident Workflow form)	Enter a valid Short description (e.g., "WiFi not working in library") and a Caller; also try leaving the mandatory Caller / Short description fields empty.	Valid inputs accepted; mandatory fields (marked *) show an error when empty.	Valid inputs were accepted and tickets INC00511 and INC00512 were created. Caller and Short description are mandatory (*) on the form; the empty-field attempt is not shown in the document.	Pass (valid input)
FT-02	Auto-Number Validation (ticket number: prefix INC, 5 digits; no numeric user input in this project)	Create tickets and check the generated Number field.	A unique, sequential number is generated automatically for each ticket, without duplication.	Numbers INC00511 and INC00512 were generated automatically and were unique.	Pass
FT-03	Auto Classification (Category and Subcategory assigned from Short description)	Enter Caller and Short description, save the form and reload it. Scenario 1: "WiFi not working in library". Scenario 2: "Projector not turning on".	Category and Subcategory are filled automatically: Wi-Fi → Network / Wi-Fi; Projector → Hardware / Projector (Password → Access / Forgot Password; Slow computer → Performance / Slow Computer).	Scenario 1: Category Network, Subcategory Wi-Fi (INC00511). Scenario 2: Category Hardware, Subcategory Projector (INC00512). Password and Slow computer branches are configured; tests not shown in the document.	Pass (Scenarios 1 & 2)
FT-04	Email Notification / Flow Connection Check (Send Email action, flow Active)	Activate the flow; open All menus → Emails (System Logs), search the subject and use Preview Email.	Email "Your Request for the issue has been submitted." is sent to the caller's email.	Email records with this subject were found in System Logs → Emails (type send-ready, SMTP) and the email preview was displayed.	Pass
PT-01	Response Time Test (classification and email after ticket save)	Use a timer to check how long Category/Subcategory take to appear after saving.	Should be under 3 seconds.	Not measured in the project document.	Not tested
PT-02	Concurrent Ticket Creation Test	Create multiple tickets at the same time and observe flow execution.	Flow should not slow down and every ticket should be classified.	Not performed in the project document.	Not tested
PT-03	File Upload Load Test	Upload multiple files and check processing.	Should work smoothly without crashing.	Not applicable — the project has no file-upload feature.	N/A
